SUBJECT INDEX TO VOLUME 38, 1992

[A]

acetic acid/ethanol production from cellulose 227
acid soil-tolerant *Rhizobium* strains 391
Acinetobacter 191
alginate-entrapped bacteria 429
alkaline phosphatase 263
alpha-galactosidase 23
5-aminolevulinate 439
ammonia 407
α-amylase 1
α-amylase molecular 293
α-amylase subunit 293
anaerobic digestion of sewage sludge 195
antifungal antibiotic iturin 505
antifungal-antibiotic iturin 13
aphidicolin 87
aphidicolin sensitive marine bacteria 87
apiculate yeasts, partial sequences of 18S and 26S rRNAs of 585
ascomycetous yeasts 501
asexual sporulation 497
Aspergillus niger 605
Aspergillus ochraceus TS 283
Aspergillus tamarii 617
ATP content 263
attachment 165
Aureobasidium sp. 145
Azotobacter vinelandii 635

[B]

Bacillus thuringiensis 385
bacterial alginate 641
bacteriochlorophyll 439
bacteriocin 271
basidiomycetes 289
basidiomycetous yeasts 501
bioreactor 605
Bradyrhizobium 417
Brochothrix 511

[C]

cellulolytic bacteria, colonization of the rumen of calves 447
characterization and identification of homofermentative lactobacilli 121
chemotaxonomy 93, 191
chitosanase produced by *Bacillus circulans* 135
citric acid 605
classification 363
cloning of chitosanase gene 135
Clostridium difficile—S layer 63
coproduction of iturin A and surfactin 635
Corynebacterium murisepticum 23, 533
Cryptococcus albidus var. *aerius* 83
Cryptococcus albidus var. *albidus* 83
Cryptococcus albidus var. *diffluens* 83
Cryptococcus neoformans 491
Cyanobacteria 407
cyst formation 541

[D]

Debaryomyces carsonii comb. nov. 623
Debaryomyces emend. 623
Debaryomyces etchellsii comb. nov. 623
dehalogenase 237
diaminopropane 191
DNA-DNA hybridization 237, 313
DNA-DNA hybridization of homofermentative lactobacilli 121
DNA relatedness 83

[E]

ecology and toxigenicity of *V. cholerae* non-01 253
electrophoretic karyotyping 313
electroporation with newly-isolated plasmids 13
energy production yeast alternative respiratory 457
enzyme regulation 417
erythritol-producing activity 145
Erythrobacter 439
erythrose reductase 145
Escherichia coli 157
estimation 283
evolution 491
extracellular invertase 533

Cryptococcus neoformans 491
Cyanobacteria 407
cyst formation 541

[D]

Debaryomyces carsonii comb. nov. 623
Debaryomyces emend. 623
Debaryomyces etchellsii comb. nov. 623
dehalogenase 237
diaminopropane 191
DNA-DNA hybridization 237, 313
DNA-DNA hybridization of homofermentative lactobacilli 121
DNA relatedness 83

[E]

ecology and toxigenicity of *V. cholerae* non-01 253
electrophoretic karyotyping 313
electroporation with newly-isolated plasmids 13
energy production yeast alternative respiratory 457
enzyme regulation 417
erythritol-producing activity 145
Erythrobacter 439
erythrose reductase 145
Escherichia coli 157
estimation 283
evolution 491
extracellular invertase 533

[F]

fermentation 605
Filobasidium species, partial sequences of 18S and 26S rRNAs 559
fungal differentiation 617
Fusarium oxysporum 227

[G]

gas chromatography/mass spectrometry (GC/MS) 497
G+C contents, genus *Malassezia* 79
gene cloning for iturin production 505
genetically engineered microorganism 237
GlcNAc-MurNAc-pentapeptide 53
GlcNAc transferase 53
glycolytic flux 511
glyoxylate pathway 417
grapes 501

[H]

Hanseniaspora, partial sequences of 18S and 26S rRNAs of 585
HIV inhibition 303
homofermentative lactobacilli in fermented foods 121
host range extend 327
hydrogen evolution 407

[I]

identification 363
immobilized bacteria 429
immobilized cells 605
immobilized enzyme 1
immunoblot analysis 385
in situ 283
in vitro DNA replication 353
in vivo NMR 511
inhibition of denitrification 553
intracellular pH 567
intracellular polyol 35
isomaltulose 483
iturin producing *B. subtilis* 505
iturin-producing bacteria 13

[K]

β-ketoadipic acid 497
Klebsiella planticola 483
Klebsiella terrigena 483

[L]

Lactobacillus pentosus 121
Lactobacillus plantarum 121
Lactococcus lactis 271
Lentinus edodes 289
Leucosporidium fellii, partial sequences of 18S and 26S rRNAs 559
Leucosporidium lari-marini, partial sequences of 18S and 26S rRNAs 559
linear DNA plasmid 289
lipase production 429
lipid-cycle reaction 53
low temperature 263

[M]

Malassezia furfur 79
Malassezia pachydermatis 79
Malbranchea 75
β-1,4-mannan 343
β-1,4-mannanase 343
β-1,4-mannanase-producing bacteria 343
marine bacteria 87
mass spectrometry 553
melibiose-utilizing bacterium 23
membrane potential 567
metabolic inhibitors 497
methanogenesis 195
methanogens, colonization of the rumen of calves 447
microcycle conidiation 617
mitochondria 289
mol% guanine plus cytosine 83
mosquitocidal parasporal inclusion 385
mreBCD genes, of *E. coli* 157
murG gene, *Escherichia coli* 53
mushroom, -discrimination of 597

[N]

Nadsonia, partial sequences of 18S and 26S rRNAs of 585
new species of *Streptomyces* 627
N_2-fixing *Enterobacteriaceae* 523
nisin 271
nitrogen fixation 263
nod-gene transfer 327
Nostoc linckia 263
Nostoc muscorum 263

[O]

osmoregulation 35

[P]
p24 assay 303
Paracoccus 93
partial sequences of 18S and 26S rRNAs, of apiculate yeasts 585
partial sequences of 18S and 26S rRNAs, of *Filobasidium* and *Leucosporidium* species 559
partial sequences of 18S and 26S rRNAs, of *P. carsonii* and *P. etchellsii* 247
partial sequences, of 18S and 26S rRNAs of *Sporopachydermia* 179
pBR322 supercoiling 379
penicillin-binding protein, in *Escherichia coli* 157
penicillin-binding protein, regulation of 157
pH homeostasis 511
phenol 497
phenylpropenoids-polymerized 303
photoproduction 407
phototrophic bacteria 439, 541
phylogenetics 491
phylogeny 541
phylogeny, of *Pichia abadieae* and *Dipodascus ingens* 247
phylogeny, of Q-9 *Pichia* 247
phylogeny, of *Sporopachydermia* 179
Pichia carsonii, phylogeny of 247
Pichia etchellsii, phylogeny of 247
pine cone extract-PC6 303
plasmid 165
plasmid pKYM 353
Plectonema boryanum 407
Pleurotus cornucopiae 47
Pleurotus ostreatus 47, 289
Pleurotus pulmonarius 47
Pleurotus salmoneostramineus 47
Pleurotus species 597
polyamine 575
polyamines 93, 191
primary structure of chitosanase 135
propionate, anaerobic degradation of 195
protease metalloprotease 209
protoplast regeneration 75
protoplasting 75
Pseudomonas fluorescens 209
Pseudomonas syringae 165
psychrophilic 209
pulse-field gel electrophoresis 47
pyruvate kinase 511

[Q]
Q10 possessing marine bacteria 87

[R]
raffinose metabolism 533
raffinose-utilizing bacterium 23
RFLP-restriction fragment length polymorphism 597
Rhizobium 417
Rhizobium fredii USDA193 327
Rhizobium leguminosarum bv. *trifolii* 327
Rhizobium transconjugant 327
Rhodocista centenaria 541
Rhodosporidium 363
Rhodothermus 575
Rhodotorula 363, 497
rolling circular replication 353
root-nodule bacteria 417
Roseobacter 439
ruminal cellulolytic bacteria 567

[S]
16S rRNA 541
Saccharomyces cerevisiae 313
Saccharomycodes, partial sequences of 18S and 26S rRNAs of 585
Schwanniomyces castellii 457
Scytalidium sp. 1
sewage sludge, anaerobic digestion of 195
shape determination 157
species of *Kitasatosporia* 627
Sphingobacterium faecium sp. nov. 465
Sphingobacterium heparinum comb. nov. 465
Sphingobacterium piscium sp. nov. 465
Sphingobacterium thalpophilum comb. nov. 465
Sporopachydermia lactativora, partial sequences of 18S and 26S rRNAs of 179
Sporopachydermia, partial sequences of 18S and 26S rRNAs of 179
steroid 283
Streptomyces atroaurantiacus 627
Streptomyces azaticus sp. nov. 105
Streptomyces cochleatus sp. nov. 105
Streptomyces cystargineus 627
Streptomyces kifunensis 627
Streptomyces paracochleatus sp. nov. 105
sucrose synthesis 533
sugarcane 523
sugar-tolerant yeast 35

sulfate reducers, colonization of the rumen of calves 447
sulfate reduction 195
suppressive effect of *B. subtilis* against phytopathogens 635
surface characteristics 165
surface-active agents 279
synergistic effect of lipopeptides against *F. oxysporum* 625

[T]
taxonomy of *Kitasatosporia* 105
taxonomy of *Sphingobacterium* 465
taxonomy of *Streptomyces* 105
tetracycline resistance protein 379
Thermonema 575
thermophiles 75
thermophilic *Bacillus* sp-JF 293
thermophilic bacteria 575
thermostable α-amylase 293
Thermus 575
Thiobacillus ferrooxidans 279
Thiosphaera pantotropha 553
transcriptional control 617
transformation 283
transformation of *Bacillus subtilis* 13
trehalulose-producing bacteria 483
Tween-80 279

[U]
ubiquinone, genus *Malassezia* 79
ubiquinone 10 (Q10) 87
undecaprenol-pyrophosphoryl-N-acetylmuramyl-pentapeptide 53
URA5 491

[V]
Vibrio sp. 343
virulence factors in *Aeromonas* spp. 185

[W]
wild yeasts 501

[X]
xylan fermenters, colonization of the rumen of calves 447

[Y]
yeast 497
yeasts 363

[Z]
Zygosaccharomyces bailii 313
Zygosaccharomyces bisporous 313
Zygosaccharomyces rouxii 35, 313
